

## FileMaker in the Enterprise

The FileMaker Workplace Innovation Platform is the premier low code/pro code custom app development environment for corporate workgroups and departments on the market today.

### The Challenge

Enterprise IT professionals generally focus on two key areas of computing: enterprise level operations and individual desktop level management. Appliance apps like Excel can be powerful tools but sharing a spreadsheet among multiple users breeds data and version management headaches. Employees can spend more time looking for data than doing their actual job. At the workgroup level of 2 - 500 employees, however, employees need powerful and collaborative management solutions.

### The FileMaker Platform

Innovators are opening their computing and data management environments to the FileMaker Workplace Innovation Platform to address the needs of workgroups more effectively and efficiently. FileMaker allows organizations to share data across desktop, mobile, and the web securely and in real time. A FileMaker custom app can be hosted on premises or in the Cloud using proven security and encryption standards.

The FileMaker Platform makes it easy for enterprise IT. Practical standards support – ODBC, SQL, JavaScript, SSL/EAR, OAuth 2, JSON and REST, Win Server 2019, XenApp, and VMware – plus low management requirements and a rock-solid server environment make it easy to adopt FileMaker.

### Real Workgroup Apps

Colibri develops powerful management apps that allow enterprise to manage datasets, work processes, and entire business lines at low cost and with tremendous return on investment. Take advantage of custom apps for your workgroups.

## One Platform for All Devices

The FileMaker Platform is the most flexible low code/pro code environment on the market. From one codebase and one UI/UX toolset, we deliver apps to desktops, mobile devices, and the most popular browsers on the web. And share data among different devices seamlessly.

## The Technology Bridge

All enterprises use Excel and scalable apps like Oracle and PeopleSoft. But Excel is not a multiuser app and enterprise tools require ongoing management and can be cost-prohibitive for workgroups. FileMaker integrates and shares data easily and bridges the individual and the enterprise.

## Custom App Prototyping

Technological innovation can be costly. Enterprises make major investments in applications without always knowing if they will be successful or provide a reasonable return. Priorities may shift mid-project and an app loses its chance to make a difference.

FileMaker offers a way forward for prototyping. Develop ideas, test security, and see results at a fraction of the cost, and scale up as necessary.
